Security Architect/Cloud – Irving, TX

Job Ref: 20181006

The Senior Information Security Architect position will be a hands-on role covering all security aspects supporting the Client's Cloud service offering. In addition, this is a thought leadership position responsible building and enhancing the security maturity within the organization. High level responsibilities include oversight of operational security processes, identifying security improvement opportunities by assessing current situation; evaluating trends; development and implementation of security enhancements, and interacting with customers. In addition, this position will collaborate with internal product development and IT organizations to help facilitate security best practices into our products and service portfolio.

Responsibilities:

- Acts as the Subject Matter Expert (SME) for security policy and procedure, security design and implementation, and incident response and mitigation.
- Assessing, building, and supporting security solutions and controls including: SEIM, IPS, internet content filtering, Identity and Access Management, web application firewalls(WAF), vulnerability scanners, penetration tests, Active Directory group policies(GPOs), and logical access controls
- Provide thought leadership and advancement of the Cloud service portfolio
- Develop, implement, monitor, and manage compliance against security practices
- Develop and implement security improvements by assessing current situation, evaluating trends, and anticipating requirements
- Collaborate with the corporate IT security team to develop and support corporate security risk management programs.
- Address the security aspects of configuration management, contingency planning, and other operational processes relevant to support the JDA Cloud service offering
- Develop and provide visibility of organizational KPI's
- Define deployment security standards for customer facing services
- Participation in the RFP process; interface with internal/external customers as needed
- Collaborate with other organizations to champion enhancements of cloud services offerings and capabilities
- Participate in internal and external audits as required
- Assess and evaluate the security posture of 3rd party vendor products and services

Qualifications:

- A Bachelor's Degree in Information Systems, Computer Science, or Computer Engineering and minimum 10 years' field experience. CISSP certification is highly desired.
- Candidate must have the expertise to interpret and improve Cloud's technical and business environment, familiarity with national security standards, experience with ISO 27001/2, PCI DSS,
