IT Linux Systems Administrator – Dallas, TX

Job Ref: 20181011

The Associate IT Systems Administrator supports Linux, UNIX and Windows operating system environments within product facing and back office networks, disaster recovery site and engineering/software development environments and provides systems level support for application and middleware services. The Associate IT Systems Administrator contributes to systems administration, application support, middleware administration, software deployments, release management, systems monitoring design/implementation and 24/7 on call support for mission critical applications and services.

Requirements:

- 5 years Linux/UNIX and Windows Systems administrator experience within large 24/7 mission critical enterprise environments; experience with Linux Red Hat, CentOS or Debian distributions and Windows Server operating systems in large enterprise environments.
- Knowledge of network and Internet concepts, services and protocols
- Knowledge of Application Performance Monitoring
- Knowledge of IT Systems architecture, design, and security
- Understanding of incident management, problem management, release management and change management concepts
- Understanding of relational database management systems such as SQL and Oracle
- Basic scripting skills (e.g. Shell, Perl, Python)
