## WAN/LAN Network Architects/Engineers

← Available Jobs

### **Network Engineer – Dallas, TX**

**Job Ref: 20181015**

The successful candidate will work with the Infrastructure team to design and support a highly available network, assist in successful implementation of network-related infrastructure projects, and help define the strategic direction, design and execution of our network security solutions. The ideal candidate will also assist other Infrastructure team members, including local and remote compute/storage engineers and application developers, in the process of troubleshooting system-wide issues, along with the execution of company-wide technical initiatives and projects.

#### **Responsibilities:**

- Analyze business and technical requirements to determine system architecture and design, identify potential gaps in the architecture and propose solutions.
- Ability to design complex network systems that impact multiple areas of IT Operations and Development teams while accounting for security considerations.
- Manage existing network architecture, wireless architecture, firewalls, and security assets associated with existing cloud deployments.
- Implement and design router, switch, wireless and firewall configurations, as needed.
- Provide recommendations to improve network, wireless and security performance.
- Provide system-wide engineering support for conflicts, troubleshooting, and resolution of issues as they arise.
- Review and evaluation of new and existing networking products.
- Diagnose and mitigate problems affecting network performance using software and hardware tools.
- Remain current on technological developments and applications and evaluate products for purchase.
- Apply patches to ensuring the company is protected against developing threats.

#### **Requirements:**

- Bachelor's degree in Computer Science, Information Technology, related field, or equivalent experience.
- Minimum 6 years' experience required, 4+ years preferred in supporting enterprise networks.
- Cisco IOS, Aruba OS, Fortinet Firewalls, Juniper SRX, Brocade ICX, Brocade VDX, F5 LTM, F5, ASM, F5 APM, Palo Alto Firewalls, OSPF, BGP, STP, RSTP, and SIP.
- Cisco, Brocade, Aruba, Fortinet, or F5 certifications are desired for this role.
- Perform troubleshooting of network problems utilizing network analyzers and sniffers or other troubleshooting tools.
- Wireless Networking experience – Aruba is a plus.
