Network Engineer – Irving, TX
Job Ref: 20181016

The Network Engineer will be responsible for managing a predominantly Cisco based network environment. Will be responsible for configuring, installing, and maintaining an enterprise network infrastructure and related technologies/applications while partnering with other Infrastructure Engineers to achieve the strategic goals and direction of the IT organization.

Responsibilities:
- Install, configure and maintain virtual and physical appliances and supporting ecosystems
- Monitor network performance and resources and implement performance tuning
- Troubleshoot network and service issues with application and security teams
- Identifies and recommends opportunities to improve and enhance network communication services to internal and external customers
- Works closely with multiple technology departments to ensure highest network uptime and application support
- Responsible for network communication equipment such as Wireless devices, Routers, Switches and Load Balancers
- Performs traffic analysis and capacity analysis of network systems
- Recommends and documents changes to system configurations through change management process
- Participates as a department resource for all network related projects
- Documentation of network systems, Visio Drawings, job aids, project plans, implementation plans, and handoff documentation for helpdesk team

Requirements:
- Bachelor's degree in Computer Science or related discipline OR equivalent work experience required
- CCIE preferred
- 5+ years of relevant technical experience in an enterprise network engineering and support role with experience in network engineering, network design, and Security Infrastructure support
- Extensive knowledge of Cisco infrastructure devices including LAN, WAN and wireless
- Strong understanding on network architecture including standard protocols, OSI model, switch, route and wireless
- Working knowledge of information security practices and hardware
- Extensive network troubleshooting knowledge
- Understanding of VoIP architecture specific to Cisco UCCX
